Anycloud Backup for 365
Based on *Veeam* Software & *IBM* Cloud technology

365

Anycloud Backup for 365 is a partner-ready SaaS offering for data protection delivered by Anycloud and is created with the intent to safely back up data and restore.

The purpose of Anycloud Backup for 365 is to provide a secure backup of data stored within the main services including Exchange Online, OneDrive for Business, SharePoint, and Teams for end-users.

"Anycloud is the right choice for us, not only because they deliver what we need, but they also do it with the right professional skills and with a customer service that is top class. Anycloud is truly innovative."

- Fellowmind

Why choose backup for 365?

Microsoft's shared responsibility policy states that Microsoft is an availability platform and that Microsoft's primary responsible is taking care of the uptime of the MS 365 platform. On the other hand, the end-customers are responsible for access and control of the data residing in the platform, making it a necessity for businesses to back up data away from the Microsoft environment.

Web portal for management and restore

Anycloud Backup for 365 has a simple-to-use intuitive web interface consisting of two portals: management portal and restore portal. The management portal is for administration of all organizational data and is where backups are scheduled. It is also in the management portal where retention periods are chosen – 1, 3, 5 or 10 years all with unlimited storage. The restore portal is from where backups can be retrieved and restored. With granular restore capabilities, data can be restored either as single items or complete objects.

WEB PORTAL FOR MANAGEMENT AND RESTORE

Technical specifications

- ✔ Anycloud Backup for 365 has a 99,9% SLA uptime

- ✔ Strong AES 256-bit encryption whenever data is in transit

CHANGELOG

Compliance

Anycloud Backup for 365 is developed by Anycloud, and the service is built with the center focus of supporting the regulations within General Data Protection Regulation and industry security standards. The technologies used are compliant as data is encrypted and once data is placed in the chosen datacenter it stays there. Data security is our priority, and our service are delivered in multiple datacentres across the globe, which are minimum tier-3 datacentres.

In addition, we deliver a feature that supports the "right to be forgotten" -act for your end-customers, which offers the unique possibility to delete specific users and their personal data. Furthermore, we have an option for an exit-strategy in place for end-customers in case of termination of the service removing data from Anycloud Backup for 365 to a 3rd party. Anycloud does not restrict, withhold, or keep data after termination.
